IBM Operational Decision Manager for Developers v 8.12.0 - Rule Designer

Rule Designer is the Eclipse-based development environment of IBM Operational Decision Manager for Developers, for making rule applications that automate the implementation of business policies. Developers benefit from a short learning curve, and best-of-class power and efficiency for rule applications development.

Rule Designer key features include co-editing and debugging of Java code and rules, auto correction of rules, decision flow control, code-generation wizards, source code control integration, and conflict and redundancy detection.

When used with IBM Operational Decision Manager for Developers, Rule Designer completes a collaborative work environment for developers to automate a company's business policies for in-house or web-based use.

For additional information and support, go to the IBM Operational Decision Manager Developer Center (https://community.ibm.com/community/user/automation/communities/communi…).
